“To foster India's next phase of growth, it is imperative that technology be deployed to enable Institutions, in both public and private sector, to generate not just individual and organizational success but also catalyze the entire ecosystem.”

Ravi Venkatesan

Chairman, Microsoft India

“Customers looking to implement large data warehouses will benefit from Data Compression which will give them a mechanism to store data more efficiently and enhance performance due to lower i/o demands, better performance on large partitioned tables enabling customers to manage large growing tables more effectively and improved and predictable query performance for common data warehouse scenarios using star join query optimizations and the new Resource Governor.”

Sanjay Mehta – CEO, MAIA Intelligence Pvt. Ltd.

{ 1KEY Agile BI Suite by MAIA Intelligence }

MAIA Intelligence is a company committed to developing and continually improving powerful Business Intelligence reporting and analysis products to meet the needs of corporate implementations. MAIA Intelligence is a "Gold Certified Partner" of Microsoft.

The Solution

1KEY Agile BI Suite is a reporting tool which connects to all databases to generate the MIS reports. It is an end to end BI solution with visually stunning presentation layer.

Key Features Used

- Its robust Intellisense helps develop code faster and easier
- JavaScript debugging is beneficial
- Multi targeting environment is added advantage to build projects on older .net framework like 2.0
- LINQ changes communication with data drastically
- AJAX support to improve performance.
- Anonymous variable concept for faster programming.

Benefits

- Migration from older to new is very easy because VS2008 supports older frameworks.
- Introduction of Language Integrated Query (LINQ) and various other data access improvements enable developers to deal with data using a consistent programmatic approach, perform data access with new data design surfaces, and use built-in classes for the occasionally connected design pattern.
- The seamless integration and familiar programming model of ASP.NET AJAX enables more efficient client-side execution to deliver end-users a more responsive Web interface.
- Improved Performance Analysis tools, and comparison analysis of performance improvements between builds.
- VS Team System enables members of your team to collaborate and communicate more effectively with other team members and business stakeholders.
- Ensure software quality using advanced quality tools at every step of the application lifecycle.
- Gain visibility into project activity and priorities to make informed decisions based on real-time data.

BI SUITE

Client Speak

Working with VS 2008 is a great experience for developers. There are many tools to create a reliable and robust software application and help work faster. Performing Scripts debugging is now very easy with script Intellisense.

LINQ and WCF have really changed the whole story of application communications as these cover lot of complex task out of the box.
