India Infoline adopts Maia 1Key

India Infoline, a financial service company, has adopted Maia 1Key business intelligence reporting and analytics software to manage its growing volume of customer data, enable operational analysis on a real time basis, speed up its corporate decision-making process for rapid growth, and to deliver overall higher quality of service to its customers.

India Infoline selected 1Key BI after an evaluation of alternative front-end BI (business intelligence) solutions, due to its flexibility, ease-of-use and powerful ability to deliver an on-demand, self-service environment that allows end-users to create, organise and interact with information cube and business views — without having to rely on the IT department or specialised report authors.
