

Quicker Assembling Of Data

Pidilite Industries was assisted by S&S Infotech & Software in quicker generation of report and dissemination of information by deploying MAIA's 1Key Cube solution

S&S Infotech & Software (SSIS), has been a long time partner of MAIA intelligence. The company provides solutions to the IT consultancies and undertakes its implementation. SSIS recently deployed MAIA's 1Key Cube solution at Pidilite Industries, which is one of the largest adhesive manufacturer in India.

IMPLEMENTATION

SSIS had implemented MAIA's 1Key Cube solution to help Pidilite in report generation and information dissemination. For larger database sizes, report level customizations are available apart from the innovative 'Processing in-memory' architecture, which enhances performance. The software named '1KEY Business Intelligence Reporting and Analytics Software' helped the company in one time query built-up activity, and generating a single report, which can show data from multiple sources like SQL, Oracle, DB2, Excel etc.

THE NEED

The main challenge has been the presentation of data. Companies these days have to submit balance sheets on a half-yearly basis. For this, information has to be accurate and available on time. Again it is not necessary that all the companies use Excel for collating data. There can be a usage of different applications at different locations. For example—the head office might use Excel for collating data, where as branch office might use Tally. The solution, which will be implemented, has to be aligned to multiple

"MAIA IS A PIONEER IN BI TODAY. THEIR USP IS THAT THEIR PRODUCTS ARE VERY COST-EFFECTIVE. WE ARE THEIR KEY PARTNERS"

**SURYAKANTH NANAWARE
CEO, S&S Infotech & Software**

applications. Right data has to be used at the right place and presented effectively.

"SSIS HAS BEEN ASSOCIATED WITH US FOR A VERY LONG TIME. THE PIDILITE IMPLEMENTATION WAS DONE SUCCESSFULLY BY THEM"

**SANJAY MEHTA
CEO, MAIA**

THE SOLUTION

1Key Cube from MAIA works with multiple databases without a need for a native database. Its query building is a one-time activity, which requires IT intervention. Business users can run, format, and make templates of their own reports. Apart from license sales, MAIA Intelligence offers onsite support services along with the MAIA partner. MAIA Intelligence also owns the entire project from license sales to project completion. 1Key architecture provides all BI reporting through a single interface and single meta-data, which leads to high performance. The rich meta-data and objects are reusable.

PARTNER SPEAK

Suryakanth Nanaware, CEO, S&S Infotech & Software said, "MAIA is a pioneer in BI today. Their USP is that their products are very cost-effective. We are their key partners and most of the time MAIA assists us in training and support. Their channel understanding and product knowledge also helps us in implementing the solution better at the customer's end."

VENDOR SPEAK

Sanjay Mehta, CEO, MAIA, said, "SSIS has been associated with us for a very long time. The Pidilite implementation was done successfully by them. Our current offering called XCM-Financial consolidation management tool will also be implemented by them and we will be giving them any kind of support as and when they require."

The latest offering from MAIA stable is XML, a financial consolidation management tool where all MIS reporting can be done. It can also produce balance sheets in any format.
